PROFILE STATEMENT

QA Engineer with hands-on experience in manual and automated software testing, specializing in functional, regression, integration, API, smoke, and end-to-end testing. Experienced in designing test cases, validating API responses and backend data, investigating defects, and tracking issues using JIRA. Skilled with Playwright, Selenium, Cypress, Newman, JavaScript, Python, and SQL. Experienced in supporting US-based clients, collaborating with cross-functional development teams, and integrating automated tests into CI/CD workflows.

EXPERIENCE

SJ Innovation LLC

Mar '26 – Jul '26

Software Quality Assurance Engineer (Trainee)

Dhaka, Bangladesh

- Designed and executed REST API test cases using Postman, validating request/response behavior, business logic, error handling, data integrity, and API functionality through SQL-based database validation.
- Performed functional, regression, smoke, integration, and release validation tests for frequent software deployments, including positive, negative, and edge-case scenarios.
- Investigated application and backend issues using API responses, browser developer tools, application logs, and database queries to identify root causes and reproduce defects.
- Identified, reproduced, documented, and tracked defects in JIRA, providing detailed reproduction steps, expected versus actual results, and investigation findings while collaborating with developers to verify fixes and prevent regressions.
- Developed and maintained automated test scripts using Playwright and other testing tools to support repeatable regression coverage and improve testing efficiency.
- Supported US-based clients by investigating reported issues, reproducing defects, communicating findings, and coordinating with developers to resolve product-related concerns.
- Performed functional and usability testing of mobile/Android applications across different devices, screen sizes, workflows, and usage scenarios.

Nov '25 – Mar '26

Software Quality Assurance Engineer (Internship)

Dhaka, Bangladesh

- Executed functional and regression tests for web-based applications, validating new features and existing workflows against requirements.
- Identified, reproduced, documented, and reported software defects with clear steps and expected versus actual results.
- Collaborated with QA engineers and developers throughout the software testing lifecycle to clarify requirements, investigate issues, and verify fixes.
- Nominated as Performer of the Month for contributions to the EMR project.

Render Lab

Jun '25 – Nov '25

Software Quality Assurance Engineer (Part-Time)

Dhaka, Bangladesh

- Performed functional, regression, smoke, and integration testing for mobile applications across iOS and Android devices, validating features, workflows, UI behavior, and cross-device compatibility.
- Tested end-to-end web-based applications, validating functionality, user workflows, business requirements, and overall application behavior across different scenarios.
- Conducted User Acceptance Testing (UAT) to validate application features against business requirements and ensure readiness for release.
- Identified, reproduced, documented, and reported defects with clear reproduction steps, expected versus actual results, and supporting evidence.
- Collaborated with developers and project stakeholders to investigate defects, communicate testing findings, verify fixes, and support successful releases.

TECHNICAL SKILLS

- **API Testing:** Postman, REST API Testing, API Automation, Request/Response Validation, Backend Testing
- **Software Testing:** Functional, Integration, Regression, Smoke, Sanity, End-to-End, Exploratory, Negative & Edge-Case Testing, Test Case Design, UI/UX Validation, Android Application Testing
- **Defect Management & QA Practices:** JIRA, Bug Tracking, Defect Reporting, Test Documentation, SDLC, STLC, Agile (Scrum, Kanban)
- **Test Automation:** Playwright, Selenium, Cypress, Newman, Mabl, Applitools
- **Programming & Scripting:** JavaScript, Python
- **Databases:** MySQL, MongoDB, SQLite, SQL Querying, Data Validation
- **Performance Testing:** JMeter
- **CI/CD & Version Control:** Git, GitHub, GitHub Actions

EDUCATION

BRAC University

Jun '21 – Oct '25

Bachelor of Science in Computer Science & Engineering

CGPA 3.51

Mirpur Cantonment Public School & College

Jul '18 – Dec '20

Higher Secondary Certificate

GPA 5.00

PROJECTS

API Automation Platform

[GitHub] | [Live Demo]

React • Node.js • Express • PostgreSQL • Postman • Newman • GitHub Actions

- Built a full-stack platform to automate REST API testing using Postman collections and Newman, with a web-based execution interface for running and reviewing API test suites.
- Implemented collection and environment management, JSON Schema validation, HTML report generation, and execution history tracking.
- Integrated GitHub Actions CI/CD pipelines to automatically execute API test suites, publish reports, and monitor pass rates across builds.

Enterprise Playwright Automation Platform

[GitHub] | [Live Demo]

React • Vite • TypeScript • Node.js • Express • Prisma • Playwright • NeonDB

- Developed a full-stack QA automation platform for creating, executing, and monitoring Playwright test suites, with real-time execution tracking through a web dashboard.
- Implemented JWT authentication with role-based access control (RBAC), test suite and test case management, execution history, analytics, and artifact viewing.
- Integrated GitHub Actions CI/CD to automatically ingest test runs, attach Allure reports, and centralize Playwright execution results for continuous quality monitoring.

AI Test Case Generator

[GitHub] | [Live Demo]

Python • Streamlit • Google Gemini • Pandas

- Developed an AI-powered application that converts software requirements and user stories into structured test cases.
- Leveraged the Google Gemini API to generate functional, boundary, negative, and edge-case scenarios automatically.
- Enabled review, editing, and CSV/Excel export of generated test cases to streamline QA documentation and collaboration.

QA Analytics Dashboard

[GitHub] | [Live Demo]

Python • Streamlit • Pandas • Plotly

- Built an interactive QA dashboard for analyzing software testing results from CSV, JSON, and Excel datasets.
- Visualized key quality metrics including pass rate, defect density, flaky tests, MTTR, test execution trends, and severity distribution.
- Created dynamic Plotly dashboards with KPI tracking and failure-to-defect correlation analysis to support data-driven QA decisions.

EXTRACURRICULAR

Mongol Tori

Oct '22 – Dec '24

Research & Documentation, AI & Autonomous Subteam

Dhaka, Bangladesh

- Contributed to test planning and validation of AI models and autonomous navigation logic, identifying performance issues and documenting test outcomes.
- Implemented data-driven decision logic using Python and ROS for object detection.
- Collected and analyzed performance data from rover sensors to validate autonomous navigation behavior and identify system performance issues.

BRACU Express

June'21 – Nov'23

Sports Journalist & Editor

Dhaka, Bangladesh

- Conducted interviews and gathered qualitative data for publication, enhancing reporting accuracy.
- Analyzed readership trends using Excel to track article engagement metrics.
- Collaborated with a diverse editorial team, developing strong communication and presentation skills for client-facing tasks.

ACHIEVEMENTS

- **1st Runner Up – NASA Space Apps Challenge 2022 (Dhaka Region):** Built a web-based space data visualization platform to display stellar variability and 3D planetary models using real scientific datasets.
- **Performer of the Month:** Nominated as performer of the month at both times during internship and trainee period in SJI
