PROFILE STATEMENT

QA Engineer with hands-on experience in manual and automated testing, API testing, UI automation, software quality validation, and integrated CRM/EMR systems. Skilled in Playwright, Cypress, Selenium, Postman, Newman, JMeter, Python, JavaScript, SQL, Git, and GitHub Actions. Experienced in developing automated test scripts, validating APIs and backend data, investigating defects, and supporting regression testing and CI/CD workflows. Experienced in Agile environments, collaborating with developers and cross-functional teams to deliver reliable software.

EXPERIENCE

SJ Innovation BD LTD

Mar '26 – Present

Software Quality Assurance Engineer (Trainee)

Dhaka, Bangladesh

- Designed and executed REST API tests using Postman, validating request/response behavior, business logic, authentication, error handling, data integrity, and API functionality through SQL-based database validation.
- Tested and validated integrated application workflows across CRM and EMR systems, investigating data synchronization, API integrations, and backend behavior across multiple business scenarios.
- Investigated application and backend issues using API responses, browser developer tools, application logs, and database queries to identify root causes and reproduce defects.
- Validated AI-assisted workflows and automated system behavior by testing generated outputs, business rules, edge cases, and failure scenarios to ensure reliable results.
- Developed and maintained automated test scripts using Playwright and other automation tools to support repeatable regression coverage and improve testing efficiency.
- Supported US-based clients by investigating reported issues, reproducing defects, communicating findings, and coordinating with developers to resolve product-related concerns.
- Identified, reproduced, documented, and tracked defects in JIRA, providing detailed investigation findings and collaborating with developers to verify fixes and prevent regressions.

Nov '25 – Mar '26

Software Quality Assurance Engineer (Internship)

Dhaka, Bangladesh

- Executed functional and regression testing for web-based applications, validating new features, automated workflows, and existing business processes against requirements.
- Investigated application behavior and integration issues, reproducing defects and analyzing API responses, application workflows, and backend data to support root-cause identification.
- Collaborated with QA engineers and developers throughout the software development lifecycle to clarify requirements, investigate issues, and verify fixes.
- Nominated as Performer of the Month for contributions to the EMR project.

Render Lab

Jun '25 – Nov '25

Software Quality Assurance Engineer (Part-Time)

Dhaka, Bangladesh

- Performed functional, regression, smoke, and integration testing for mobile applications across iOS and Android devices, validating features, workflows, UI behavior, and cross-device compatibility.
- Tested end-to-end web applications and business workflows, validating functionality, requirements, integrations, and application behavior across different scenarios.
- Conducted User Acceptance Testing (UAT) to validate application features against business requirements and ensure readiness for release.
- Identified, reproduced, documented, and reported defects with clear reproduction steps, expected versus actual results, and supporting evidence.
- Collaborated with developers and project stakeholders to investigate issues, communicate testing findings, verify fixes, and support successful releases.

TECHNICAL SKILLS

- AI & Workflow Automation:** ClickUp, n8n, Zapier, AI-assisted Workflows, Workflow Automation
- API Testing:** Postman, REST API Testing, API Automation, Request/Response Validation, Backend Testing
- Software Testing:** Functional, Integration, Regression, Smoke, Sanity, End-to-End, Exploratory, Negative & Edge-Case Testing, Test Case Design, UI/UX Validation, Android Application Testing
- Defect Management & QA Practices:** JIRA, Bug Tracking, Defect Reporting, Test Documentation, SDLC, STLC, Agile (Scrum, Kanban)
- Test Automation:** Playwright, Selenium, Cypress, Newman, JMeter, Mabl, Applitools
- Programming & Scripting:** JavaScript, Python
- Databases:** MySQL, MongoDB, SQLite, SQL Querying, Data Validation
- CI/CD & Version Control:** Git, GitHub, GitHub Actions

EDUCATION

BRAC University

Jun '21 – Oct '25

Bachelor of Science in Computer Science & Engineering

CGPA 3.51

Mirpur Cantonment Public School & College

Jul '18 – Dec '20

Higher Secondary Certificate

GPA 5.00

PROJECTS

AI Test Case Generator

[GitHub] | [Live Demo]

Python • Streamlit • Google Gemini API • Pandas

- Developed an AI-powered workflow that converts software requirements and user stories into structured test cases using Python, Streamlit, and the Google Gemini API.
- Implemented automated generation of functional, boundary, negative, and edge-case scenarios with structured outputs for consistent QA workflows.
- Enabled human review, editing, and CSV/Excel export of AI-generated test cases to validate outputs and streamline QA documentation.

API Automation Platform

[GitHub] | [Live Demo]

React • Node.js • Express • PostgreSQL • Postman • Newman • GitHub Actions

- Built a full-stack automation platform for executing and monitoring REST API test workflows using Postman collections and Newman.
- Implemented collection and environment management, JSON Schema validation, HTML report generation, and execution history tracking.
- Integrated GitHub Actions CI/CD pipelines to automatically execute API test suites, publish reports, and monitor results across builds.

Enterprise Playwright Automation Platform

[GitHub] | [Live Demo]

React • Vite • TypeScript • Node.js • Express • Prisma • Playwright • NeonDB

- Developed a full-stack automation platform for creating, executing, and monitoring Playwright test suites through a web dashboard.
- Implemented JWT authentication, role-based access control, test management, execution history, analytics, and artifact viewing.
- Integrated GitHub Actions CI/CD to ingest automated test runs, attach Allure reports, and centralize execution results for continuous quality monitoring.

QA Analytics Dashboard

[GitHub] | [Live Demo]

Python • Streamlit • Pandas • Plotly

- Built an interactive dashboard for analyzing software testing results from CSV, JSON, and Excel datasets.
- Visualized pass rate, defect density, flaky tests, MTTR, execution trends, and severity distribution to support quality monitoring.
- Created dynamic KPI dashboards and failure-to-defect correlation analysis for data-driven QA decisions.

EXTRACURRICULAR

Mongol Tori

Oct '22 – Dec '24

Research & Documentation Specialist, QA Team

Dhaka, Bangladesh

- Contributed to test planning and validation of AI models and autonomous navigation logic, identifying performance issues and documenting test outcomes.
- Implemented data-driven decision logic using Python and ROS for object detection.
- Collected and analyzed performance data from rover sensors to validate autonomous navigation behavior and identify system performance issues.

ACHIEVEMENTS

- **1st Runner Up – NASA Space Apps Challenge 2022 (Dhaka Region):** Built a web-based space data visualization platform to display stellar variability and 3D planetary models using real scientific datasets.
- **Performer of the Month:** Nominated as performer of the month at both times during internship and trainee period in SJI
